

Good AI work starts with a clear task

I connect task design, evaluation and teaching to the people doing the work.

AI workflows · prompt engineering
Teaching and enablement

A useful prompt preserves the job

I built Prompt Compass to turn rough requests into inspectable workflows, with clear requirements and comparison points.

Cleaner language can lose the task

ORIGINAL FIXTURE PROMPT

Return valid JSON only with fields category, article_id, confidence, and suggested_response. If confidence is below 0.7, set suggested_response to needs_review. Success: parser accepts the response.

SHORTER REWRITE

Return a clean structured answer with the best response for the user.

Expected winner: the original

The rewrite loses named fields, JSON-only output and the low-confidence fallback.

Structured checks support the conversation

The host AI handles the dialogue and final language. My tool makes task requirements and tradeoffs available for review.

Q: ****Stage 1 — Who is this feature spec for?****

This prompt is asking for a Prompt Compass MCP upgrade. Who needs to read and act on the output?

A: Codex — the developer who will implement the upgrade

Original public example session · proposed feature specification

Next test: compare realistic prompt revisions against an agreed task rubric and human review.

An answer needs a path back to evidence

01 Search the historical evidence

Bounded search returns source labels and stable evidence IDs.

`oppia_research → search_oppia_research`

02 Retrieve the exact evidence

Fetch the selected chunk before quoting; keep its source reference.

`get_oppia_evidence`

I built a read-only tool that helps an AI assistant find historical research, keep source references and identify evidence gaps.

Retrieval stays bounded and traceable

SQLite full-text search ranks matches with BM25. Results keep stable record and evidence IDs.

repository.py

```
66 self.connection = sqlite3.connect(  
67     f"file:{resolved}?mode=ro", uri=True, check_same_thread=False  
68 )  
69 self.connection.row_factory = sqlite3.Row  
70 self.connection.execute("PRAGMA query_only = ON")
```

The assistant can fetch exact evidence before quoting it. Evidence gaps remain visible.

Teaching a repeatable AI workflow

ChatGPT 4o for Beginners: Create Social Media Content

TASK OBJECTIVE

coursera

Task 3

Goals

Iteratively Transform Content Using AI

- Use ChatGPT to create an initial draft and make iterative refinements.
- Practice refining drafts using different prompt techniques and feedback loops.
- Analyze how each iteration impacts content quality and alignment with goals.

An initial draft gives us something to inspect

Original lesson example · initial draft for refinement against a goal

 Craft a post about Visit Brew Bliss for a great coffee experience

 **Visit Brew Bliss for an Unforgettable Coffee Experience!** 

Whether you're a seasoned coffee connoisseur or just in need of your daily caffeine fix, Brew Bliss has something special for you. Our cozy, family-owned café offers a warm and welcoming atmosphere paired with expertly crafted coffee that will elevate your day. From rich, aromatic espressos to indulgent lattes, every sip at Brew Bliss is a step towards coffee nirvana. Come for the coffee, stay for the experience. We can't wait to brew up some bliss for you!

#BrewBliss #CoffeeLovers #CaféExperience #DrinkLocal

AI Workshop Studio gives learners a visible path

One learning goal and one next action keep a course step clear. Help, files, notes and the agenda stay within reach.

The published video workspace adds chapters, a synchronized transcript, a written guide and step materials.

[View the case →](#)

Mentor review shaped the learner workflow

I proposed staged generation of personalized learner tasks, with a mentor checking the context and the output.

Two mentor checkpoints from the simplified 2024 proposal.
Deployment and time savings were not established.

REVIEW GATE 01

REVIEW GATE 02

Spatial context guides AI-assisted edits

I capture the selected object, position and collision context before asking AI to diagnose a scene bug.

The AI proposes a small source change. I check it with a build, scene tests and play.

[View the case →](#)

The portfolio is part of the AI workflow

I use AI to organize source material and test drafts, then check each public claim against its evidence.

The result connects a working example to its case, context and next action.

Earlier portfolio presentation, before visual case refinements

The person using the system matters

Documentary filmmaking taught me to listen closely. Learning design taught me to make the next step teachable.

That perspective carries into my AI work: understand the task, make the output inspectable, and leave room for human judgment.

Let's make AI useful in your workflow

For applied AI consulting, AI analysis, prompt design, enablement, and human–AI product work.
