easier to understand.

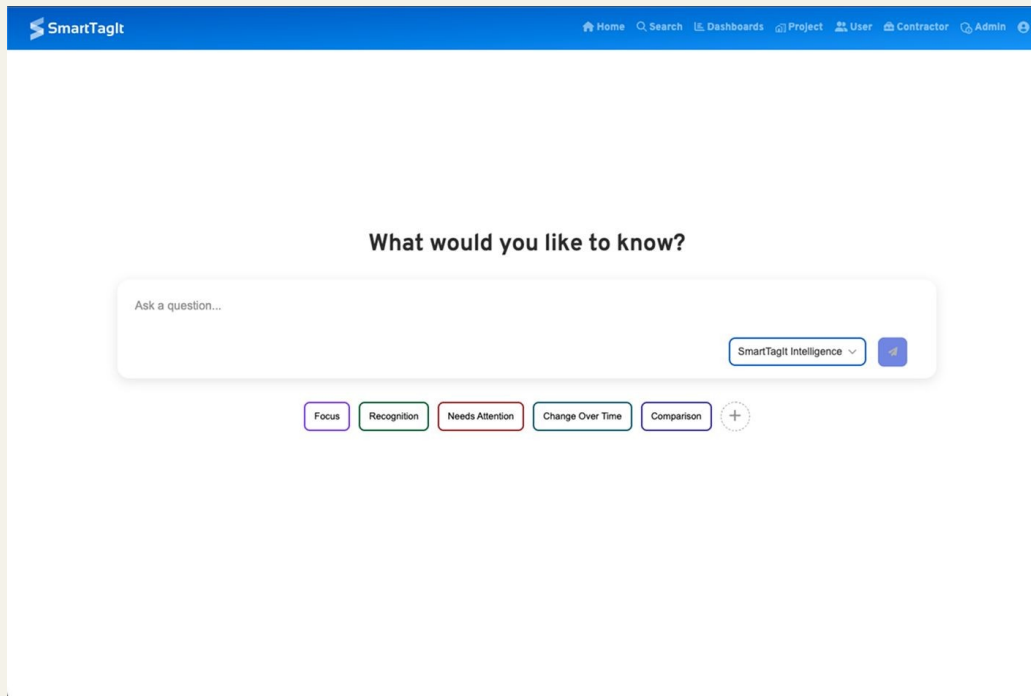

Selected design work, 2023–2026

A useful first question

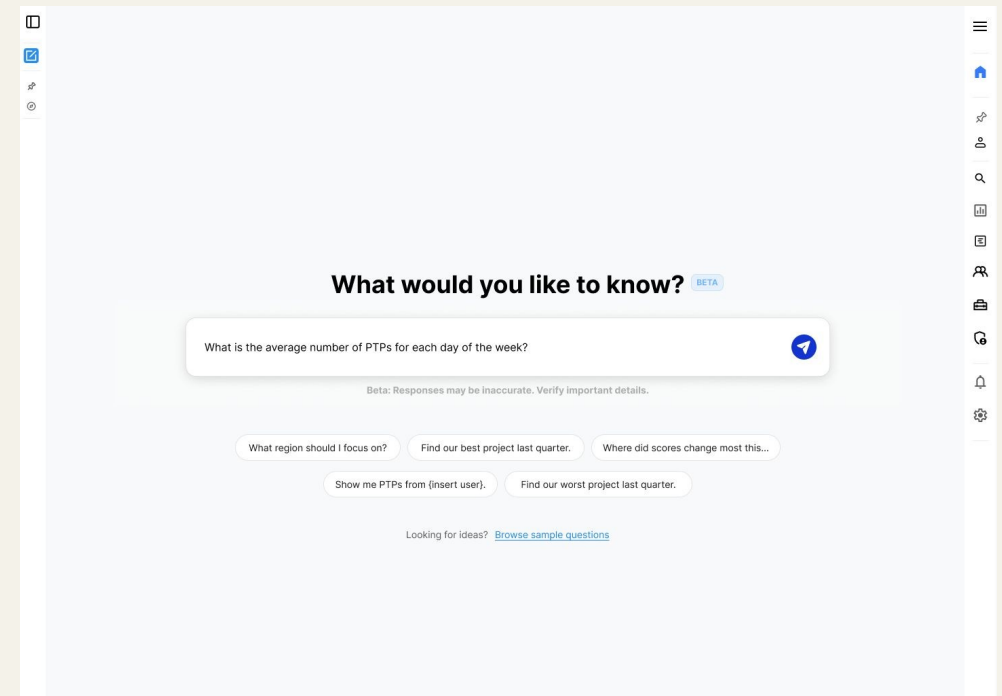

BEFORE

An empty field and broad categories.

MY DESIGN EXPLORATION

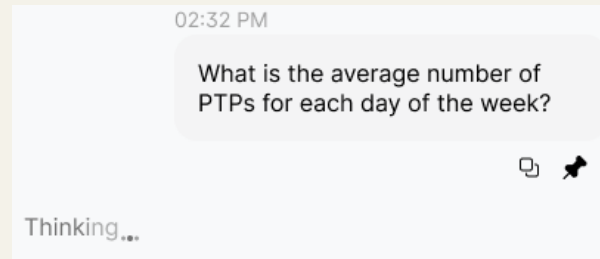

Specific suggestions, ready to edit.

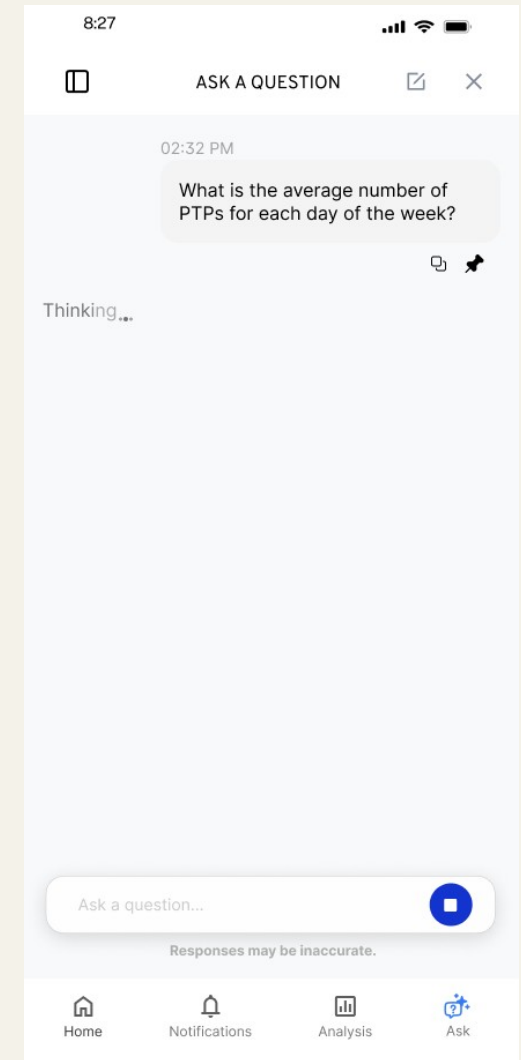

Waiting is part of the conversation

I kept the question visible and gave the response a distinct waiting state.

Animation was an implementation question to resolve with engineering.

Original state detail

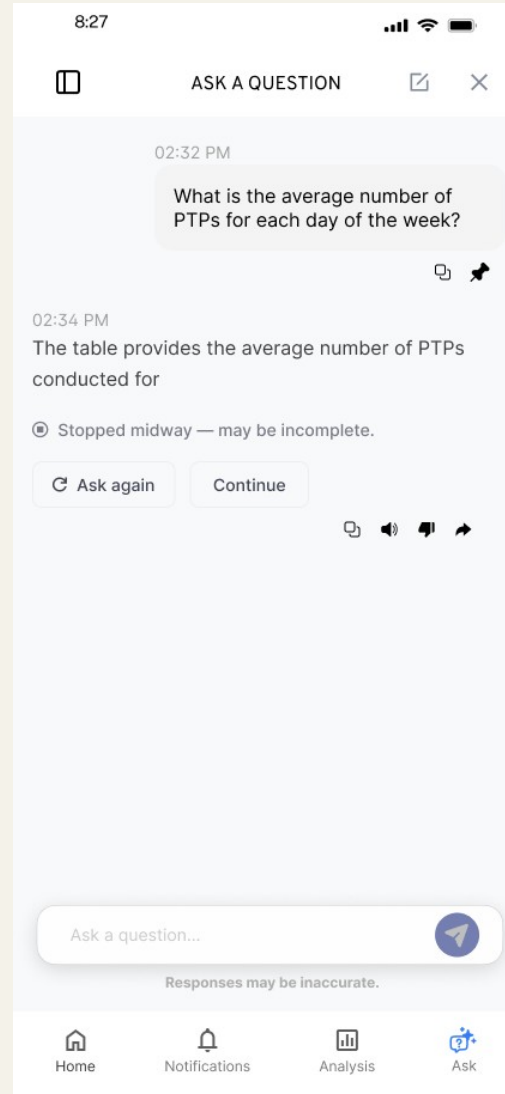

Recovery follows the failure

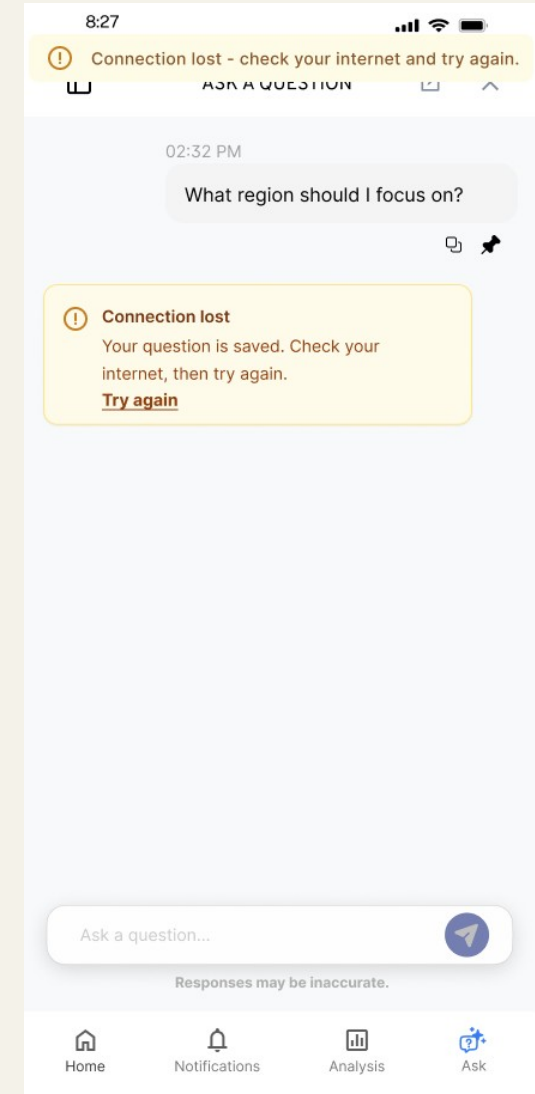

An incomplete answer and a lost connection need different next actions.

An August 2026 engineering reply confirmed implementation of the approved error states. The exact pictured variants remain unverified.

Incomplete answer

Connection lost

Feedback with context

UX Designer & Researcher (Contract), 2026

I connected a personal summary to its supporting observations and a useful next action.

Design iterations with sample content. Engineering reported web/server live September 2 and mobile live September 3, 2026.

Your safety focus this week

Repeated lift-plan checks showed up across your recent observations.

Your recent work suggests the crew is paying closer attention to lift planning, but **pinch-point hazards** still need a quick reminder.

✓ Based on 5 observations and 2 conversations

Use this in today's pre-task

When the table held more information

My grid omitted details already present in engineering’s table.

I recommended keeping the table and revised the labels to make given and received activity clearer.

Original design detail, August 2026 · values are sample content · followed-people link deferred

Table direction with clearer activity labels

A comparison needs an interpretation

Mentioning fatigue less often is a comparison. Whether that is good depends on the context.

I raised the cohort, percentile and wording questions before they became interface rules.

Original widget, illustrative values

From an observation to action

A flagged answer can lead to a specific next action inside the existing observation flow.

I kept the entry contextual and separated issue creation from approval requests.

September 8 design captures. Engineering reported core Workflow live September 23, 2026.

Shared fields, different decisions

OPEN ISSUE

Open status

No required assignee marker

The form is titled 'Add Open Issue' with a subtitle 'Please provide details for the new issue.' It contains four main sections: 'Assigned to' with a dropdown menu showing 'Select a user'; 'Contractor' with a dropdown menu showing 'Select a contractor'; 'Status' with a dropdown menu showing 'Open'; and 'Due date' and 'Severity' at the bottom. The 'Due date' field shows 'MM/dd/yyyy' with a calendar icon, and the 'Severity' field shows 'Select' with a dropdown arrow.

REQUEST APPROVAL

Awaiting approval

Required assignee marker

The form is titled 'Request Approval' with a subtitle 'Please provide details for the approval request.' It contains four main sections: 'Assigned to' with a dropdown menu showing 'Select a user' and a red asterisk indicating it is required; 'Contractor' with a dropdown menu showing 'Select a contractor'; 'Status' with a dropdown menu showing 'Awaiting approval' and a red asterisk indicating it is required; and 'Due date' and 'Severity' at the bottom. The 'Due date' field shows 'MM/dd/yyyy' with a calendar icon, and the 'Severity' field shows 'Select' with a dropdown arrow.

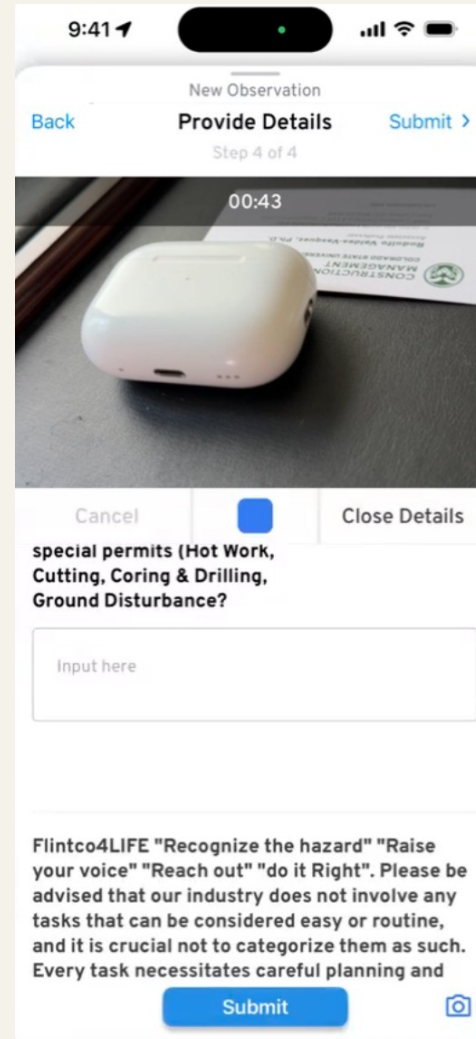

Untangle the controls from the form

Submit appeared twice. Camera controls cut across the form.

With product, I kept the split screen and focused the immediate change on the footer controls.

Consistency and standards: familiar recording controls help people recognize the next action.

RECORDING

Elapsed time and a distinct Stop control.

REVIEW

Retake or choose Use Video.

Keep the larger idea within reach

A movable camera view could leave more room to read and complete the form.

I explained the benefit, worked within the team's delivery constraints, and handed over PIP separately for future consideration.

Original proposal · benefit not yet tested

Competing entry points

Training an assistant, starting a Vibecheck and requesting support competed at the same entry point.

I used the audit to make these choices explicit for the team's review.

Error feedback beside the field

ORIGINAL

The error sat away from the login fields.

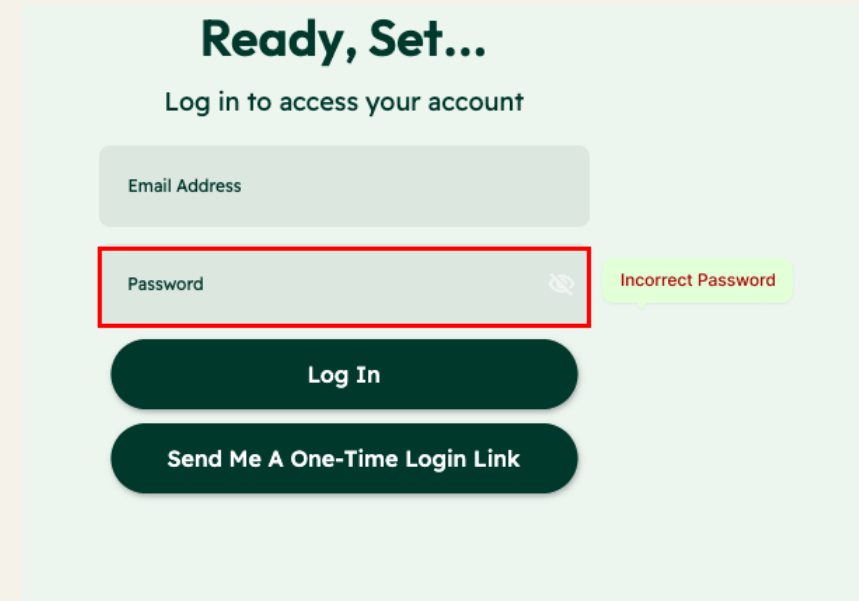

The original login form is titled "Ready, Set..." and includes the instruction "Log in to access your account". It features two input fields: "Email Address" and "Password". Below these fields are two buttons: "Log In" and "Send Me A One-Time Login Link". An error message, "Error: Invalid login credentials", is displayed in a separate dark box at the bottom of the page, away from the input fields.

Separate page-footer message:

Error: Invalid login credentials

MY RECOMMENDATION

Place the correction beside the field.

The recommended login form is identical to the original, but the error message "Incorrect Password" is placed directly beside the "Password" input field, which is highlighted with a red border. The form includes the title "Ready, Set...", the instruction "Log in to access your account", the "Email Address" and "Password" fields, and the "Log In" and "Send Me A One-Time Login Link" buttons.

Original recommendation artifact.
Exact shipped variant and usability impact unverified.

THE THREAD THROUGH MY WORK

I started by listening to people's stories

Documentary filmmaking taught me to listen closely and find the thread in a complicated story.

Those habits stayed with me in research and design. Outside work, I run tabletop games, where listening and helping a group find its way matter too.

Let's make the next step clearer

For product and UX design roles, contract projects, and collaborations.
